SKYLER LONG

Senior AI Systems Engineer | ML Ops, Claude (LLM), Kubernetes, AWS, Automation

+1 (650) 550-0394 longskyler528@gmail.com https://www.linkedin.com/in/skhighler/
https://skylerlong.vercel.app/ Beaverton, OR, United States

SUMMARY

Senior AI & Full Stack Engineer with 8+ years of experience building scalable backend systems, machine learning applications, and AI-driven automation platforms. Skilled in Python, JavaScript frameworks, Kubernetes, AWS, and ML Ops, with hands-on experience developing ML models, AI agents, and data-driven analytics systems. Experienced in deploying production machine learning pipelines, real-time analytics APIs, and cloud-native applications across enterprise environments. Proven ability to deliver high-impact solutions, including improving prediction accuracy by 14%, increasing system availability to 99.6%, and automating operational workflows to reduce manual workload by 35%. Strong background in backend architecture, data processing systems, and cross-functional collaboration, with experience leading engineering initiatives and mentoring developers while delivering scalable AI solutions.

EDUCATION

Master of Computer Science

Portland State University

GPA 3/78 / 4.0

2016 - 2018
Portland, OR

Bachelor of Computer Science

Clackamas Community College

GPA 3.65 / 4.0

2014 - 2016
Oregon, OR

EXPERIENCE

Senior AI & Full Stack Engineer | ML Ops · Automation · Kubernetes · AWS

Nike 11/2023 - Present

- Architected AI automation pipelines integrating Python services with Zapier, Monday.com, and Make.com, eliminating repetitive operational tasks and cutting manual processing time by 35%.
- Developed machine learning models using PyTorch and scikit-learn to analyse 1M+ athlete training records, increasing predictive performance insight accuracy by 14%.
- Deployed scalable ML inference APIs using FastAPI on AWS Kubernetes clusters, enabling internal data platforms to retrieve predictions in real time.
- Constructed an AI agent framework capable of retrieving operational data and generating automated reports for internal teams, shortening reporting preparation time by 40%.
- Orchestrated ML training and batch inference workflows using Docker and Apache Airflow to manage production model pipelines.
- Delivered analytics dashboards using React connected to ML APIs, enabling product and analytics teams to monitor performance metrics and model outputs.

SKILLS

Programming Languages

Python | JavaScript | TypeScript | C# | SQL

AI & Machine Learning

PyTorch | TensorFlow | Scikit-learn | Machine Learning | Model Development | LLM Applications | AI Agent Development | RAG | Feature Engineering | Model Evaluation

Powered by Enhancv

EXPERIENCE

Full Stack & ML Engineer | Python · Django · JWT

Quanergy Systems Inc. 11/2020 - 08/2023

- Led development of a HIPAA-compliant AI medical consultation platform, integrating machine learning inference services with automated consultation workflows supporting healthcare partners.
- Engineered diagnostic assistance models using TensorFlow and scikit-learn to analyse patient data and increase consultation accuracy by 12%.
- Designed secure backend services using Django REST Framework and JWT authentication to manage medical data processing workflows.
- Guided a team of three engineers while building the automated consultation system, coordinating architecture decisions and deployment strategies.
- Integrated LLM-powered information retrieval systems supporting automated patient guidance and knowledge access.
- Built operational monitoring dashboards using React to visualise system activity and consultation metrics.

Software Developer | JavaScript Frameworks · SQL Server · Docker

Sitehands 06/2018 - 07/2020

- Engineered backend services using Node.js and Express powering a document lifecycle and barcode tracking platform used by enterprise logistics clients.
- Created operational dashboards using React and AngularJS enabling field teams to monitor workflow status and document processing in real time.
- Accelerated SQL Server query performance through indexing and schema restructuring, shortening long-running database queries by 20%.
- Elevated document processing throughput by 12% through redesigned batching workflows and improved file ingestion pipelines.
- Introduced Docker-based deployment environments, increasing release stability and eliminating environment inconsistencies.
- Collaborated within agile engineering teams to deliver continuous integration and iterative feature development.

SKILLS

Backend Development

Node.js · FastAPI · Django REST Framework · ASP.NET Core · REST API Development · Microservices Architecture · JWT Authentication

Cloud & DevOps

AWS · Kubernetes · Docker · Terraform · Apache Airflow · MLflow · CI/CD Pipelines

Databases & Data Systems

PostgreSQL · SQL Server · MySQL · Redis · Database Optimization · Data Processing Pipelines

Frontend & Automation

React · AngularJS · Workflow Automation · Zapier · Make.com · Monday.com · Webhook · Event-Driven Architecture
